Bi-fuel motor vehicle—A motor vehicle with two separate fuel systems designed to run on either an alternative fuel or conventional fuel, using only one fuel at a time; or

Dedicated motor vehicle—A motor vehicle with an engine designed to operate on a single alternative fuel only; or

Flexible fuel motor vehicle—A motor vehicle that may operate on a blend of an alternative fuel with a conventional fuel, such as E-85 (85% ethanol and 15% gasoline) or M-85 (85% methanol and 15% gasoline), as long as it is capable of operating on at least an 85% alternative fuel blend.

A qualified **alternative-fuel fueling station** is the property directly related to the delivery of alternative fuel into the fuel tank of a motor vehicle propelled by such fuel, including the compression equipment, storage vessels and dispensers for such fuel at the point where such fuel is delivered but only if such property is primarily used to deliver such fuel for use in a qualified alternative-fueled motor vehicle.

Credit Available: For qualified alternative-fueled motor vehicles placed in service between January 1, 1996 and December 31, 2004, the credit is 50% of the conversion or incremental cost, up to the maximum for the vehicle's gross weight from Chart I in next column.
